

NEXTGEN AI MESSAGING

Whale — chat without limits.

Where conversations become organized, memories stay original, files move without limits, and AI helps every user chat smarter.

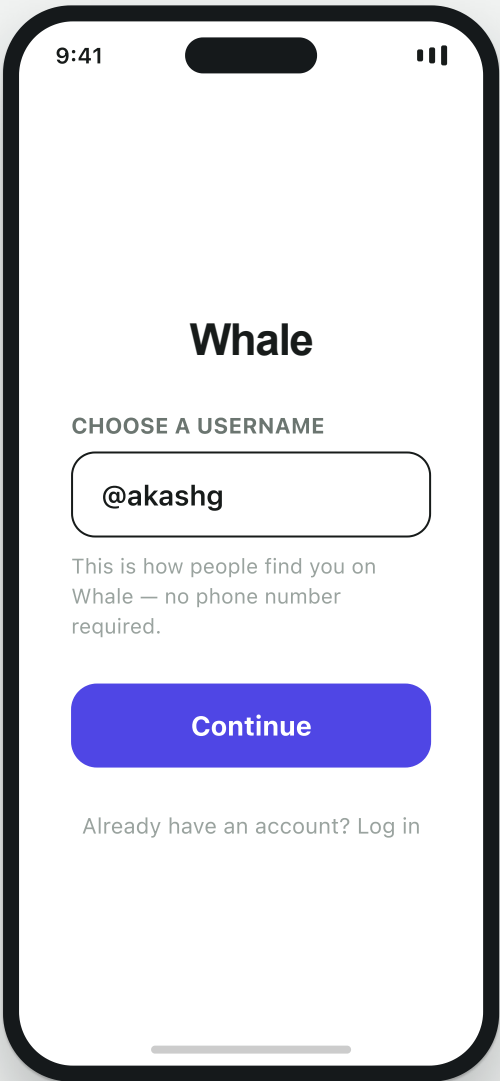

App Launch Transition screen shown while the app boots, before handing off to Waves home

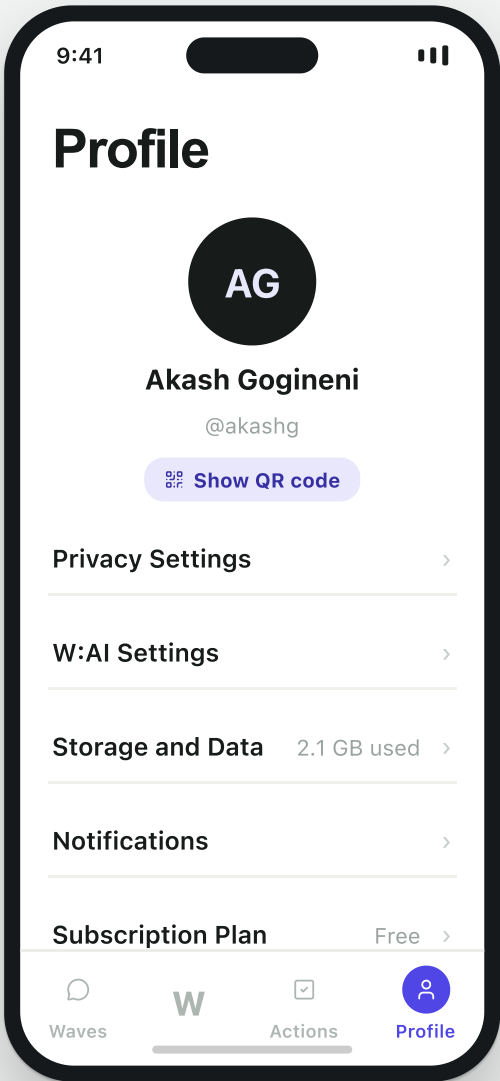

Splash — app loading

Centered logo mark on white; fades into Waves home once session/data is ready

Onboarding & Profile The two bookends — the screen that tested well, and where identity lives

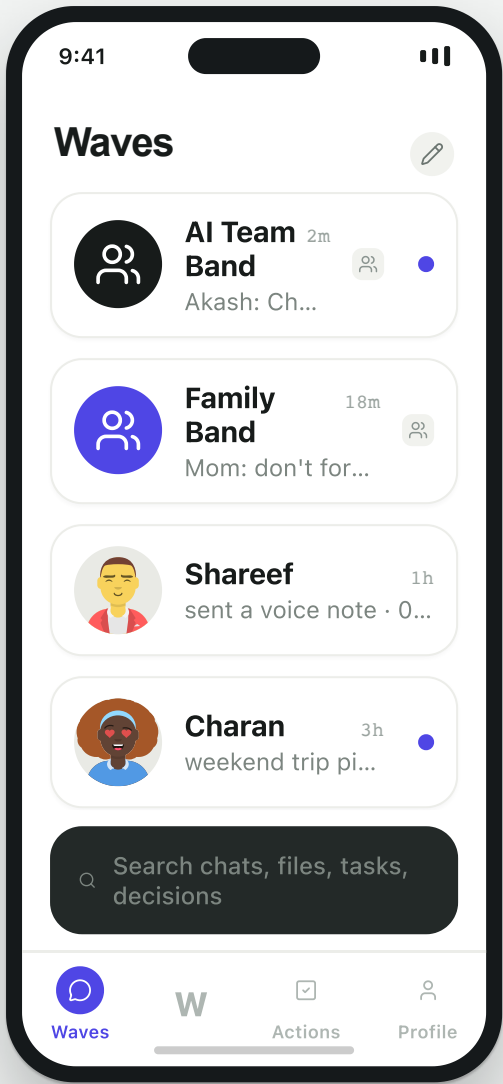

Onboarding
Kept as-is

Profile
No phone number field, by design

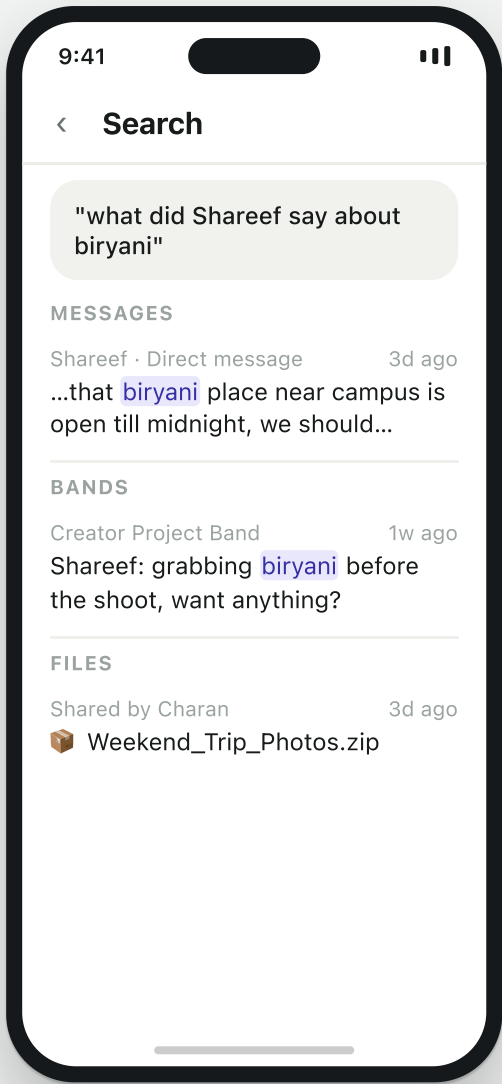

Waves & global search

Home tab, pinned row, search-first

Waves — home

Search sits in thumb-reach, right above the tab bar

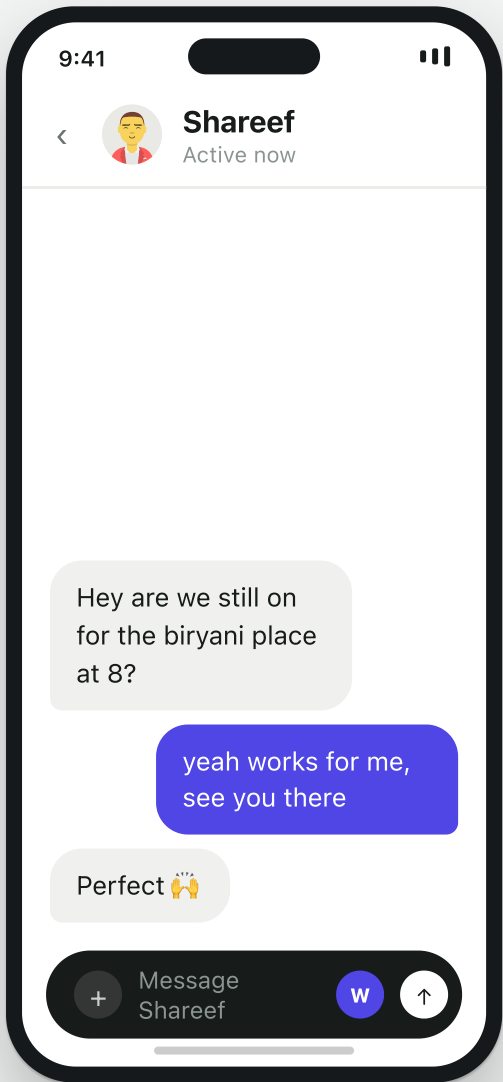

Search results

Meaning-based, scoped to AI-allowed chats

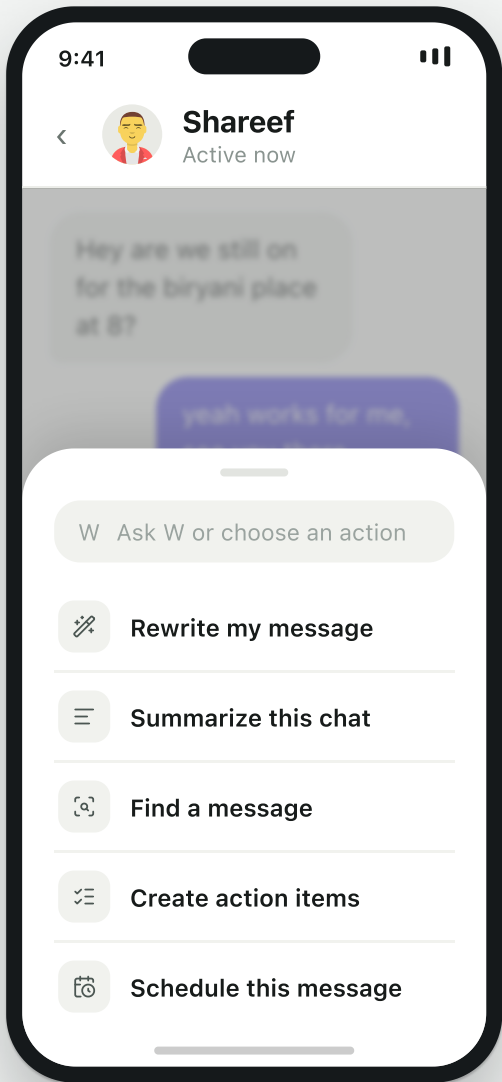

Personal chat & W:AI popup

AI is one tap away, never a separate app

Personal chat

"W" sits next to send, always visible

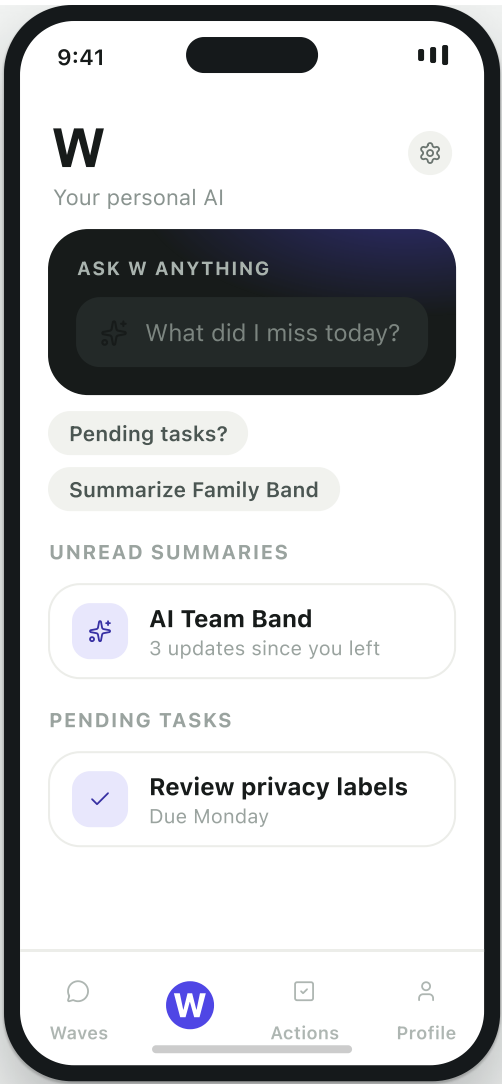

W:AI popup

One assistant, every action, in context

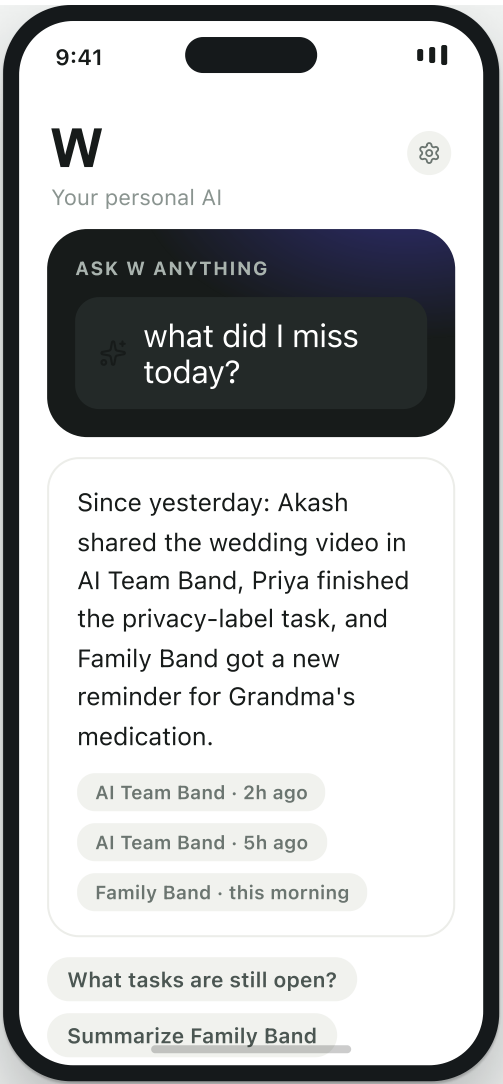

W & Actions

The other two tabs

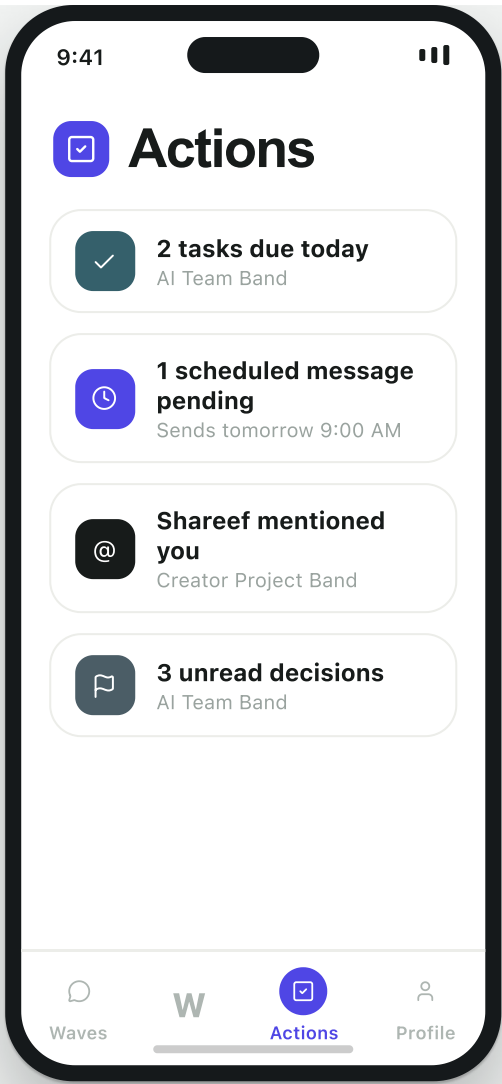

W — main screen

Questions across every allowed chat

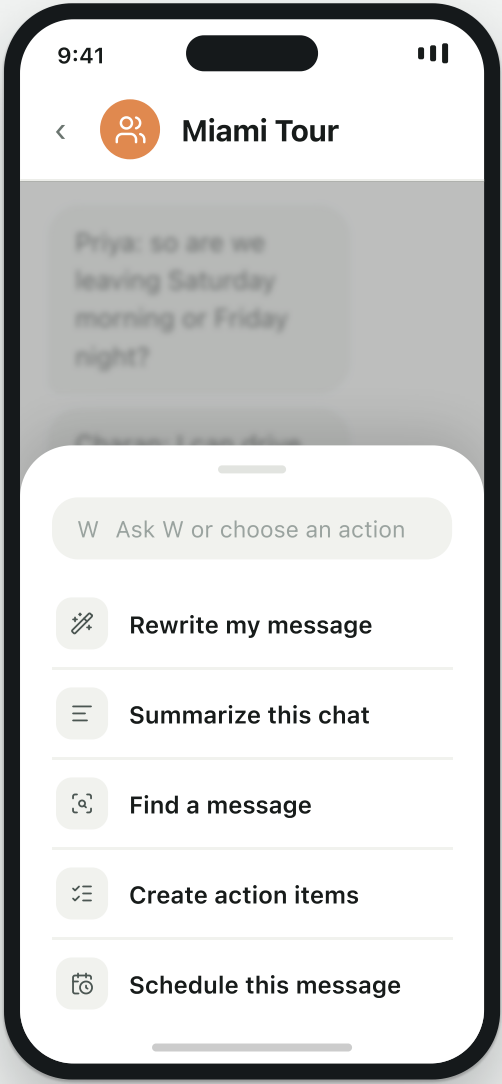

W — query result

Typing collapses to an answer with citations, not a search-results list

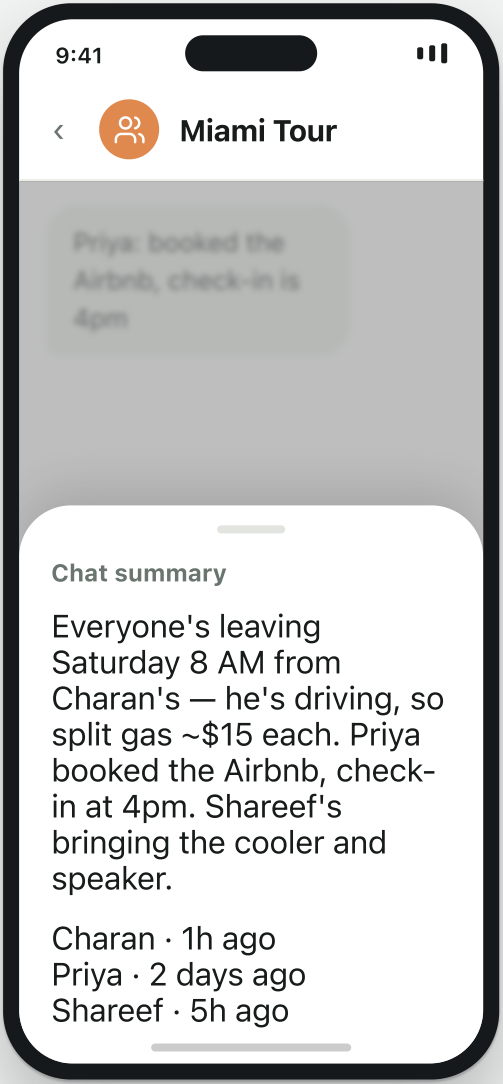

Actions

One feed: tasks, schedule, alerts, mentions

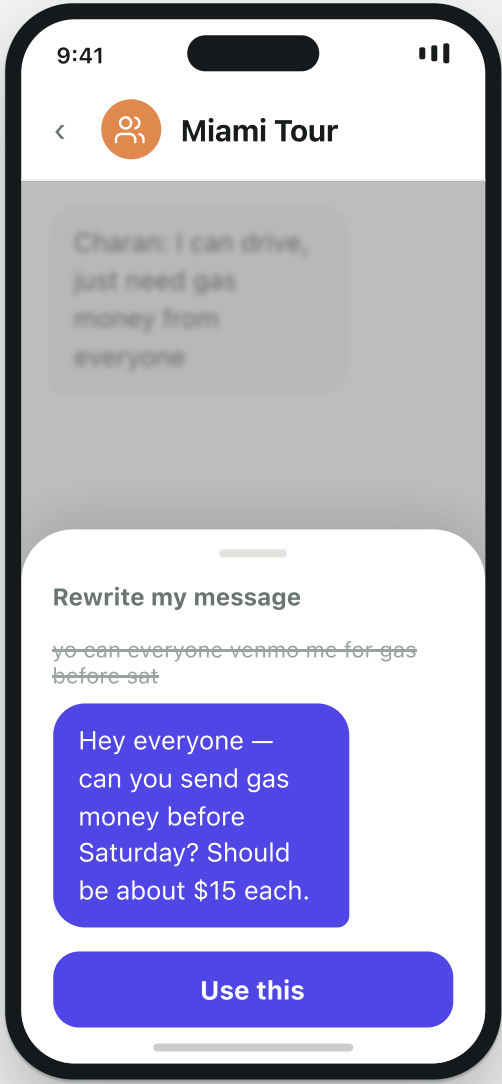

W:AI popup — inside a Band

Same 5 actions everywhere, but every answer is scoped to this chat's messages

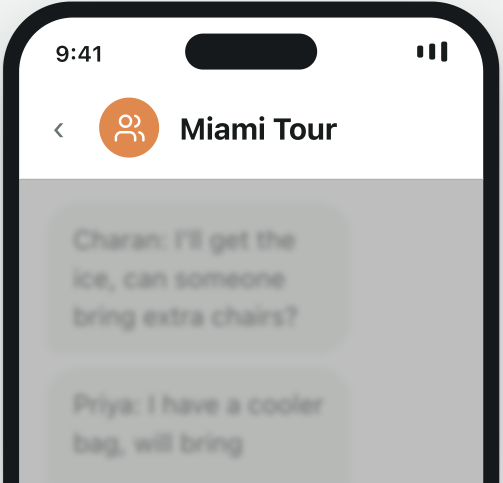

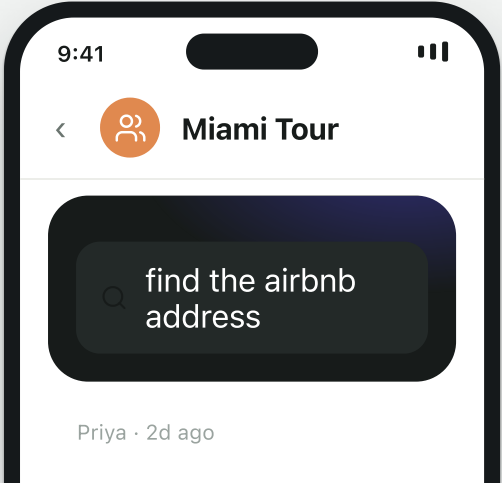

Summarize this chat

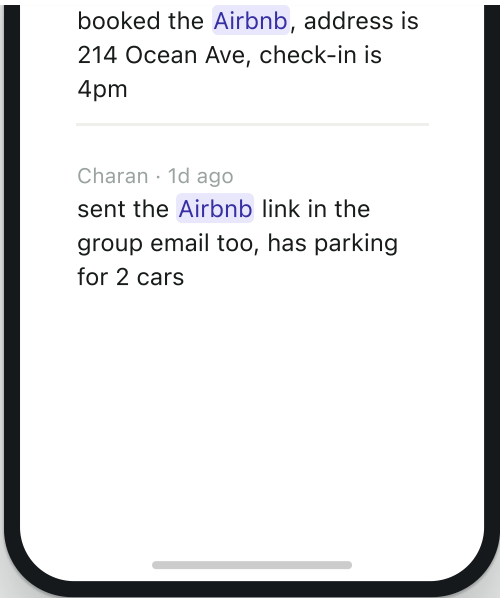

Pulls from every message since you last read, cites who said what

Rewrite my message

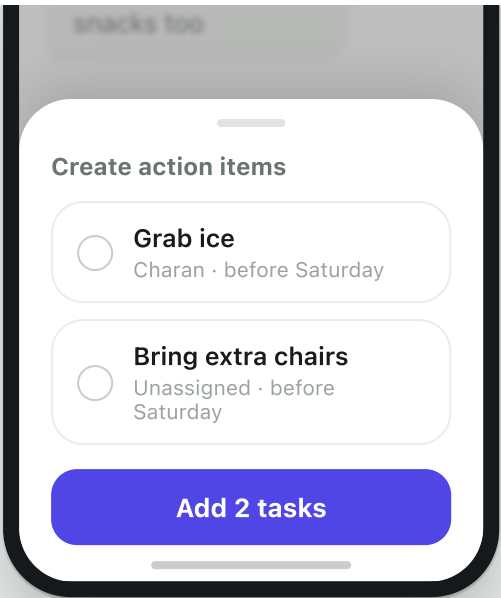

Cleans up tone and clarity before you send, never sends on its own

Find a message

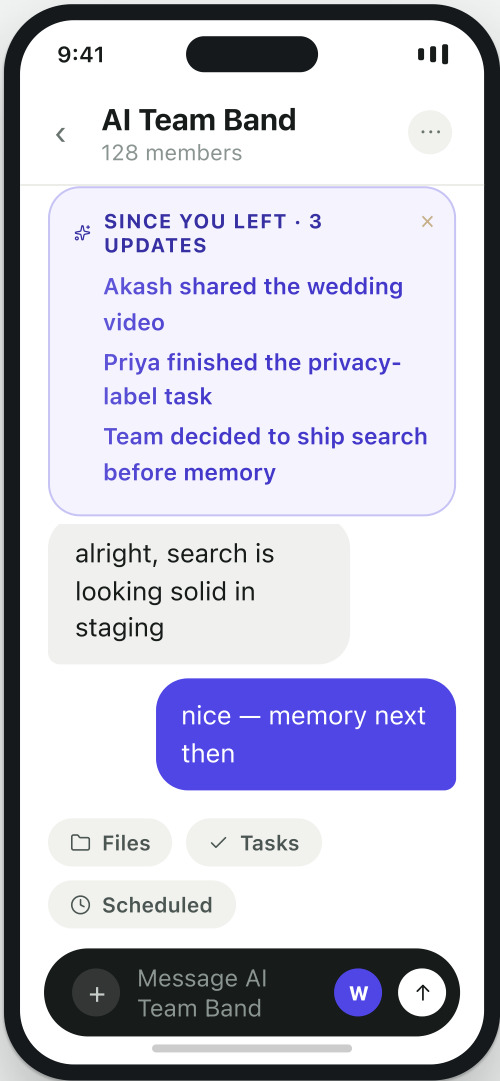

Natural-language search scoped to this chat, not the whole app

Create action items

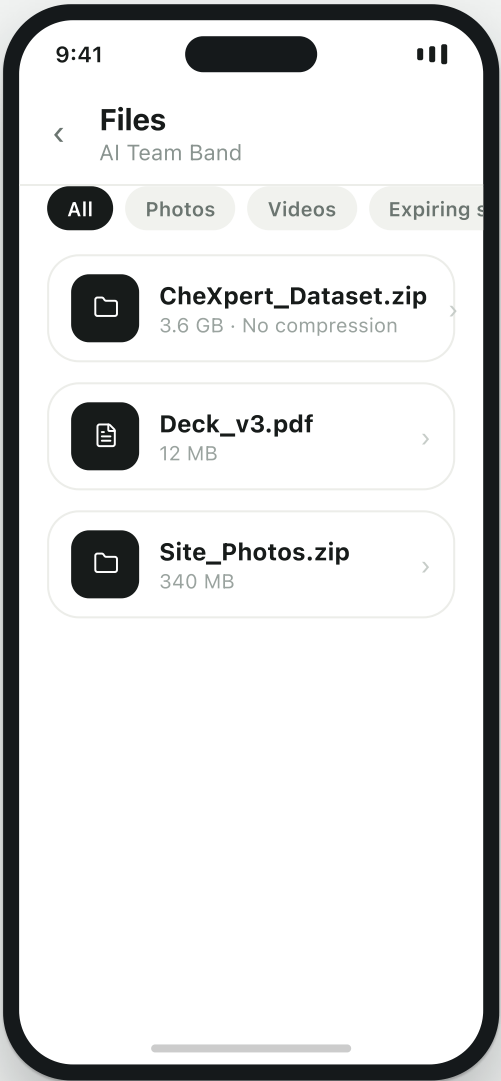

Reads intent from the last few messages, you confirm before anything is created

Bands A group chat first — organization is available, not imposed

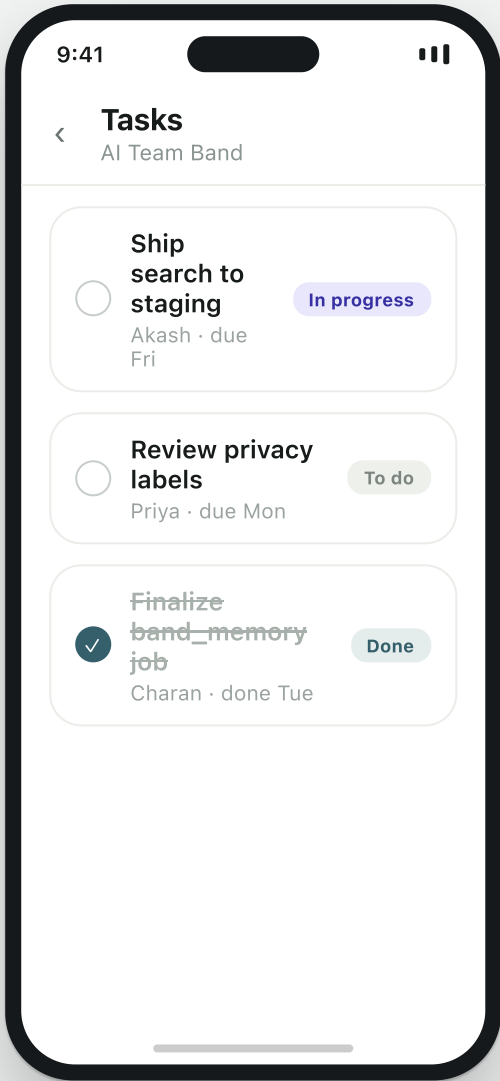

Band chat

Summary card + shortcut chips, not a tab strip

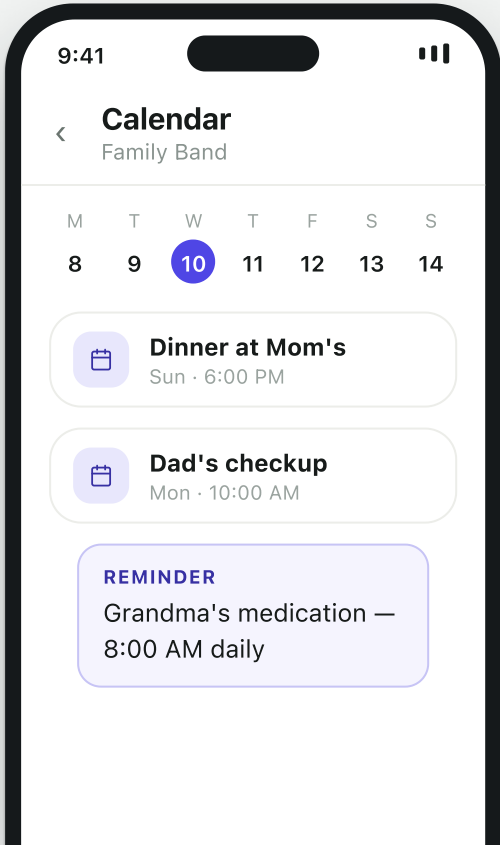

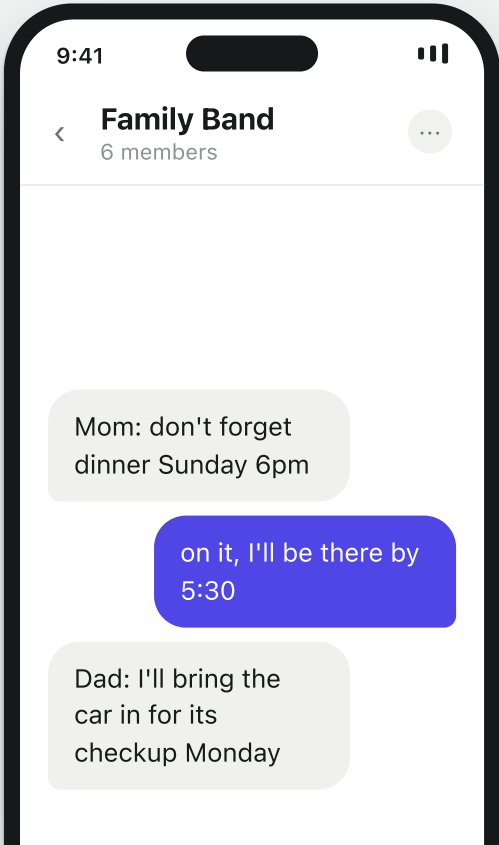

Smart File View

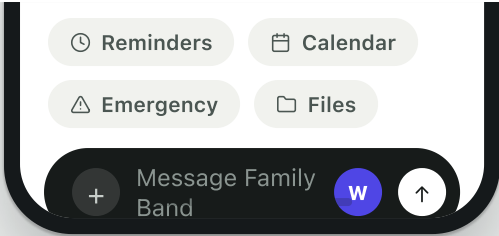

Opened from a Band shortcut, not a global tab

Task View

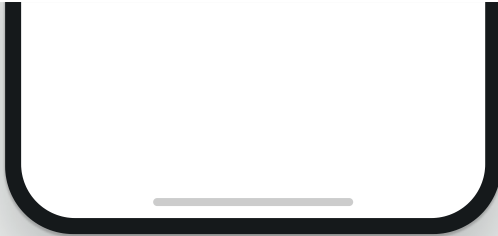

AI-detected or created from a message

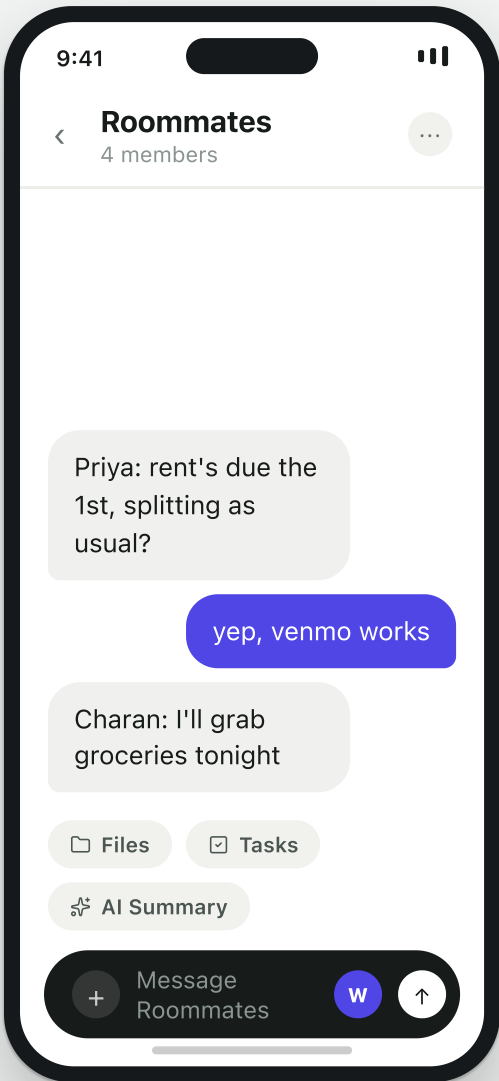

Family Band chat

Same Band structure, family-specific shortcuts

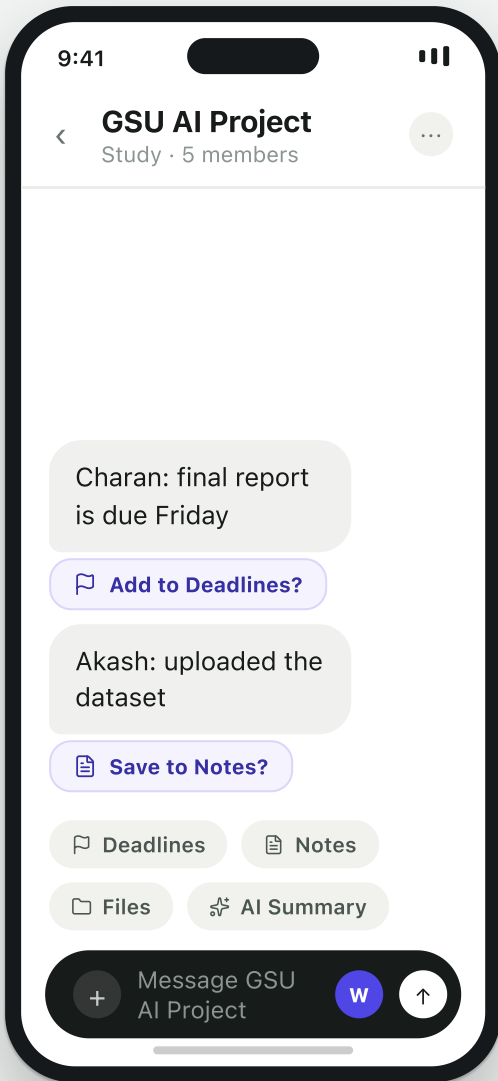

Family Band — Calendar

Opened from the Calendar shortcut

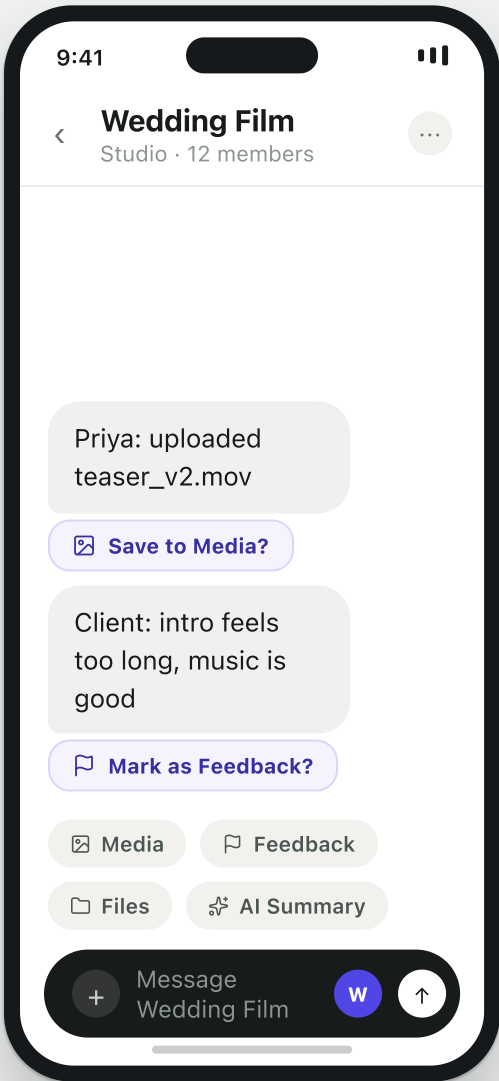

General Band chat

Everyday groups — files, tasks, AI summary, nothing more

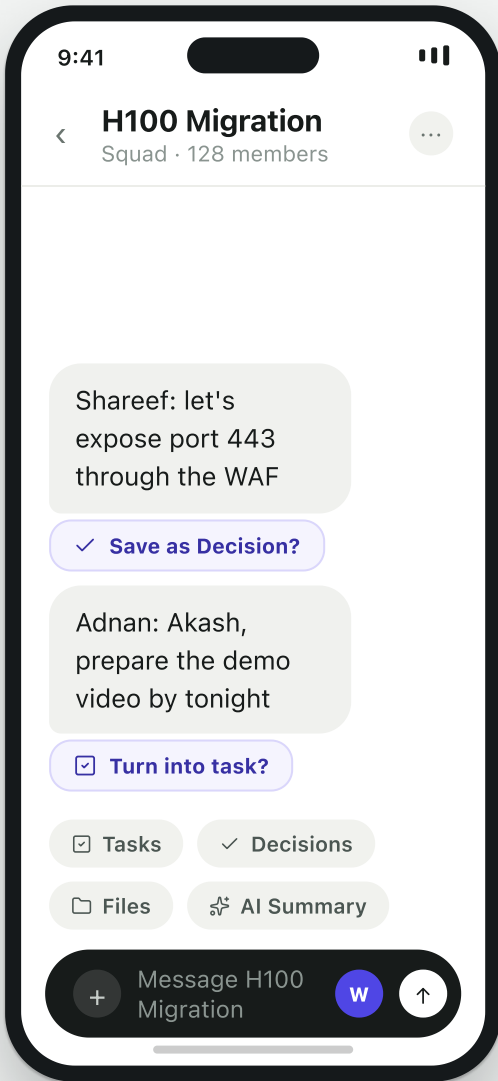

Study Band chat

Inline suggestions turn chat messages into Deadlines/Notes — nothing is auto-created without confirming

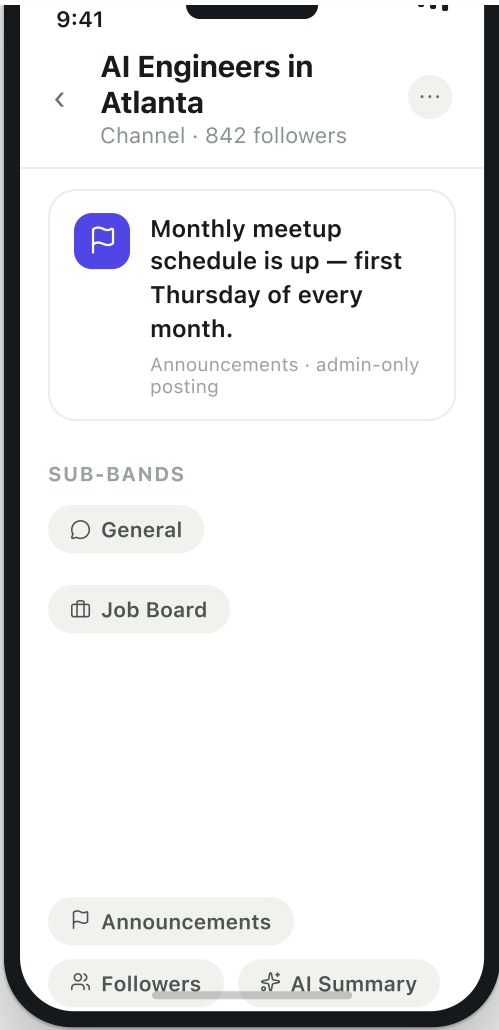

Studio Band chat

Media = original-quality files; Feedback = messages tagged as client/team notes

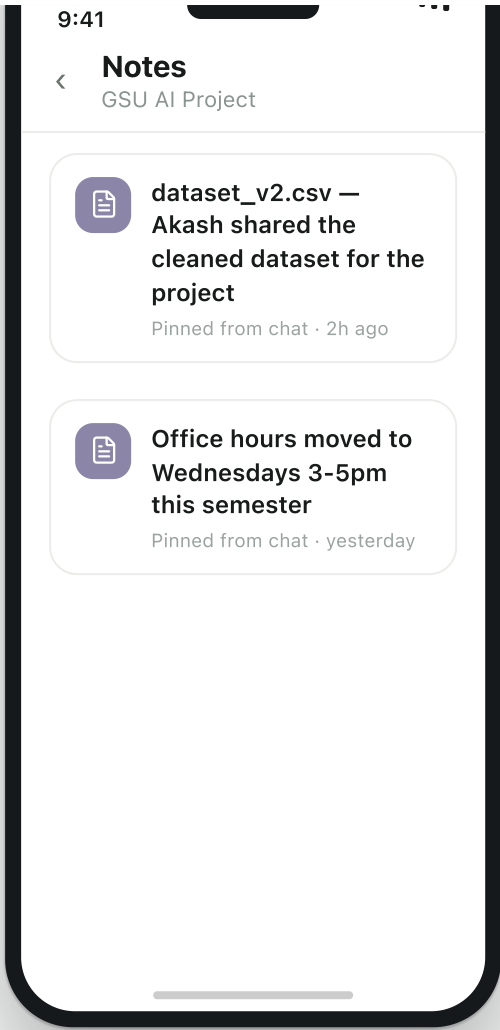

Squad Band chat

Decisions and Tasks both start from a message — long-press or accept the inline suggestion

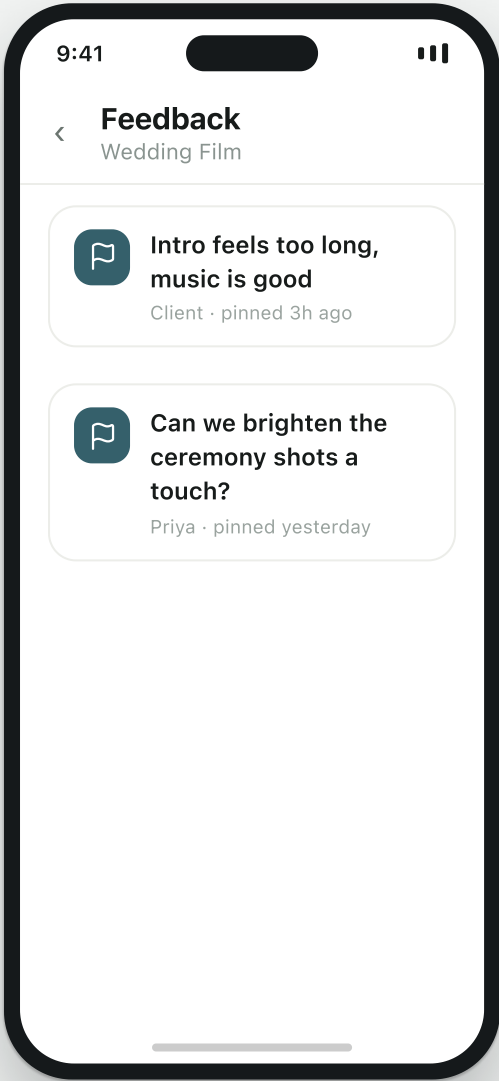

Channel Band home

Broadcast-first: Announcements + Sub-Bands, no composer on the home view itself

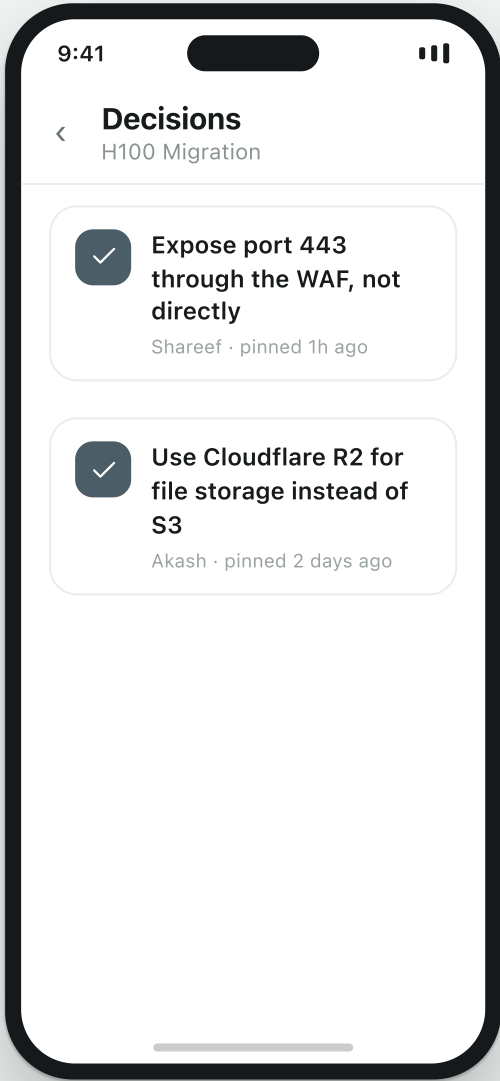

Notes (Study)

Same mechanism as Decisions/Feedback — pin a message, tag it "note"

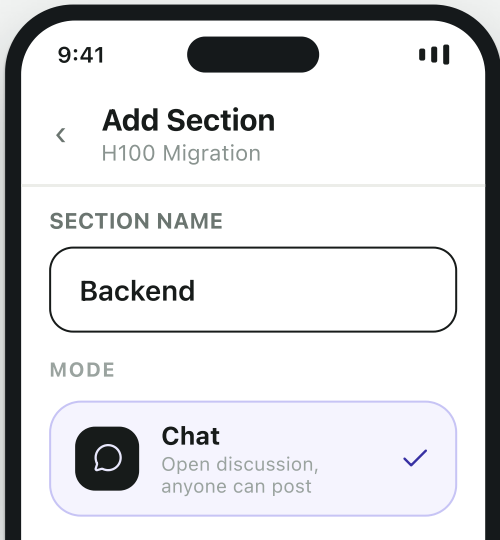

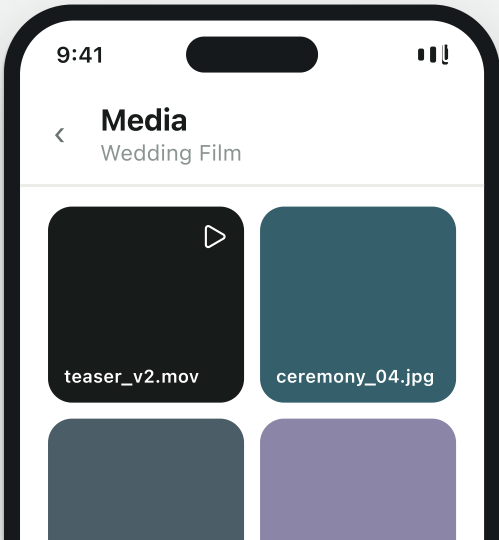

Feedback (Studio)

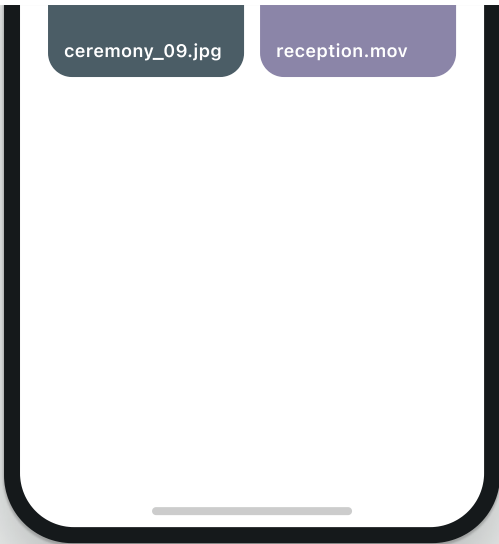

Same mechanism as Notes/Decisions — pin a message, tag it "feedback"

Decisions (Squad)

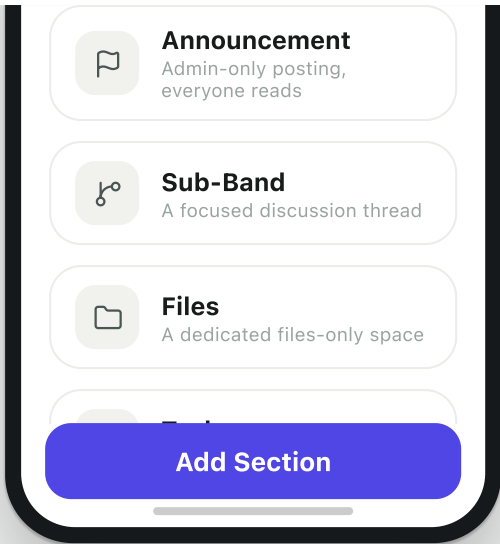

Same mechanism as Notes/Feedback — pin a message, tag it "decision"

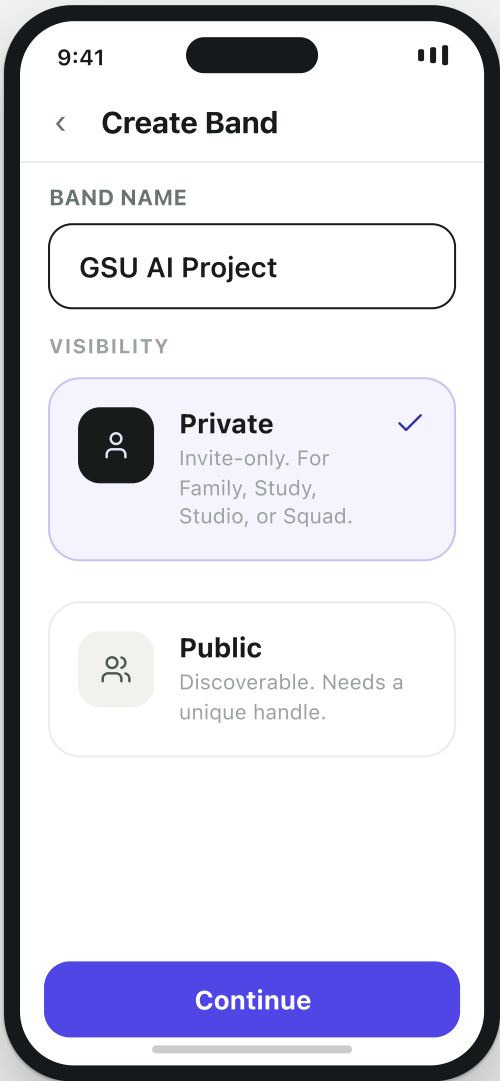

Media (Studio)

Filtered Files view — photos/videos only, original quality preserved

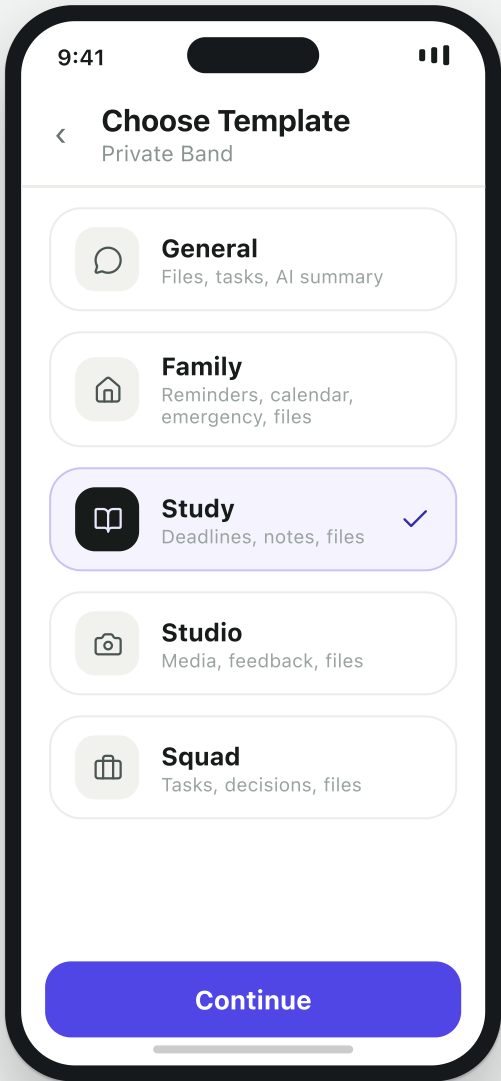

Add Section

Same members as the parent Band — available on any template, from the Overflow Menu. Categorized sub-discussion (e.g. Housing inside a GSU Band) is a Sub-Band-mode Section, not a separate Band.

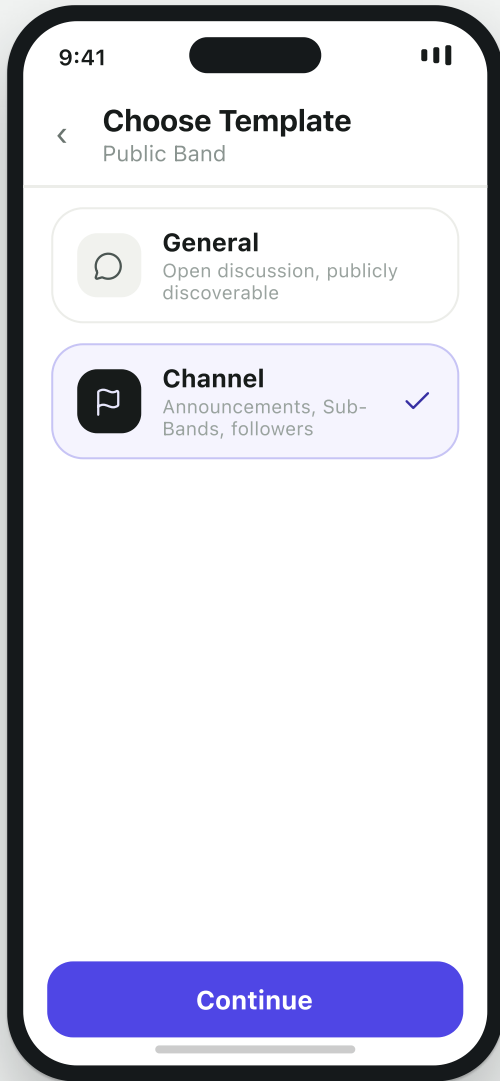

Create Band — 1. Visibility

First choice: who can find and join this Band

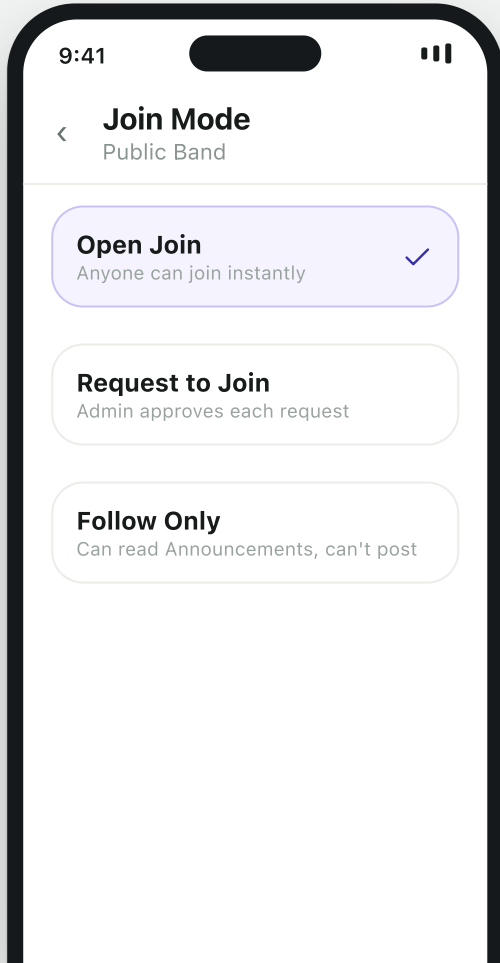

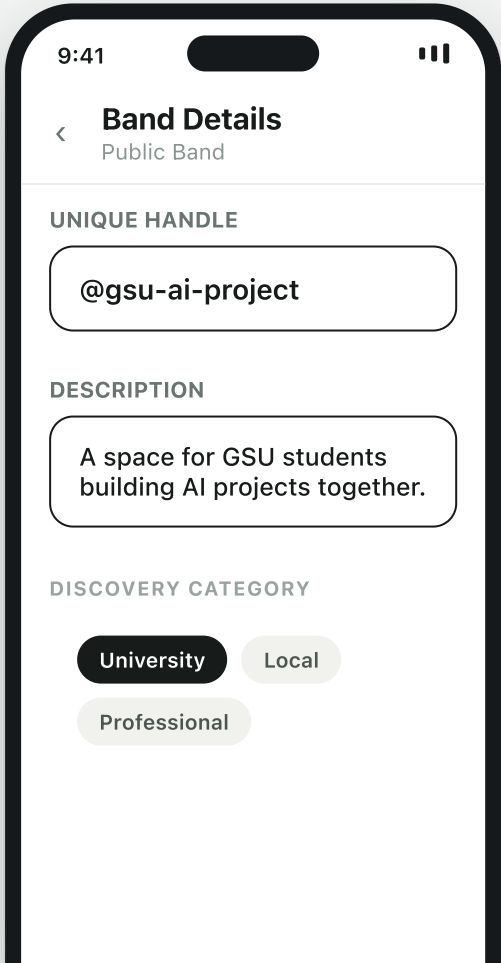

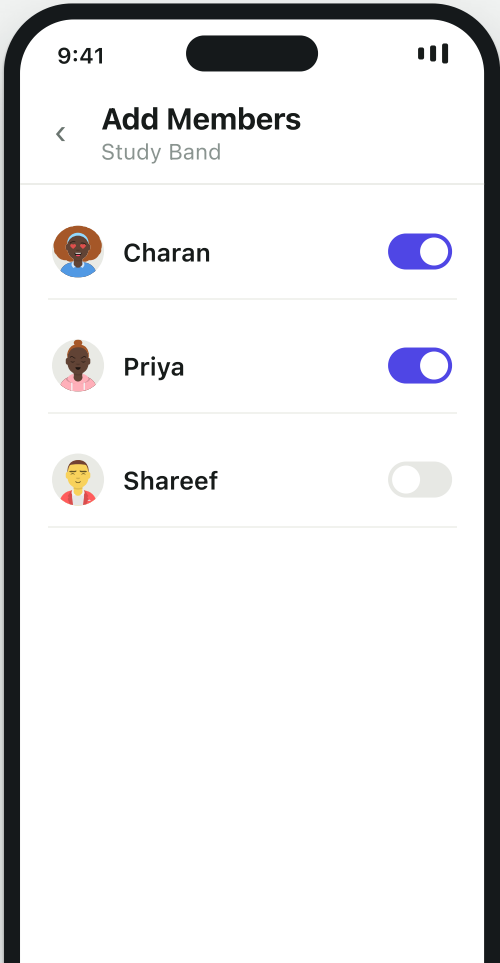

Create Band — 2a. Template (Private)

Family/Study/Studio/Squad are always private — no visibility choice for these

Create Band — 2b. Template (Public)

Only General and Channel can be public

Continue

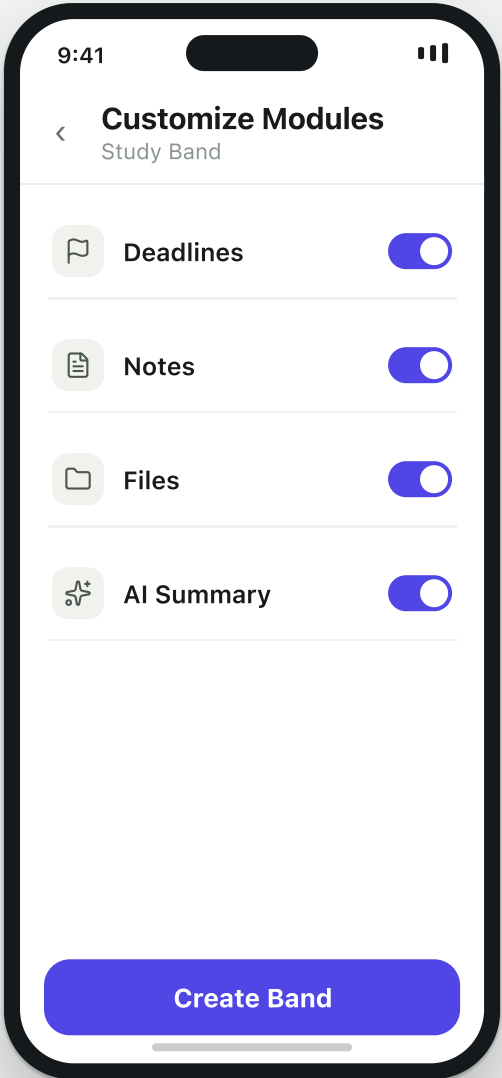

Create Band — 3a. Add Members (Private path)
Skipped entirely on the Public path

Continue

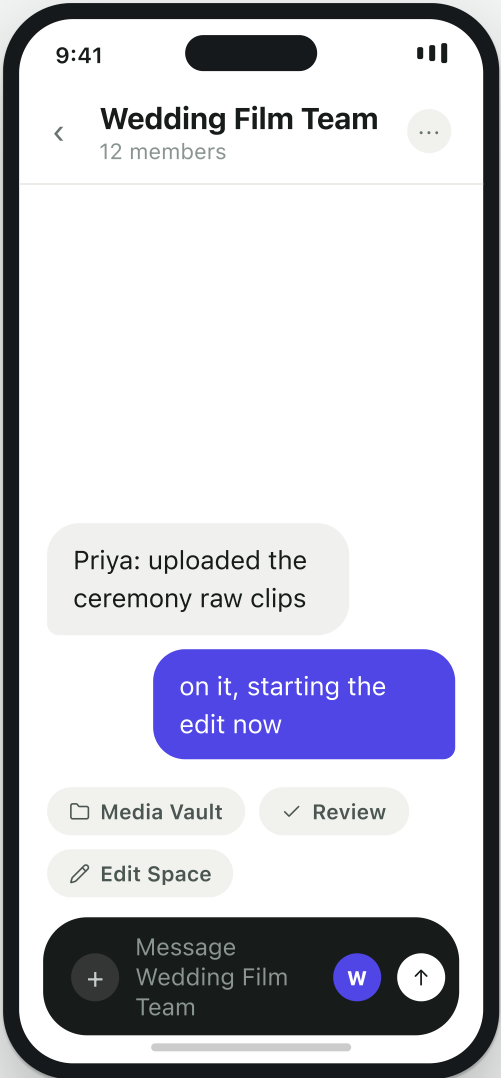

Create Band — 3b. Handle & Details (Public path)
Handle must be globally unique — checked live as typed

Continue

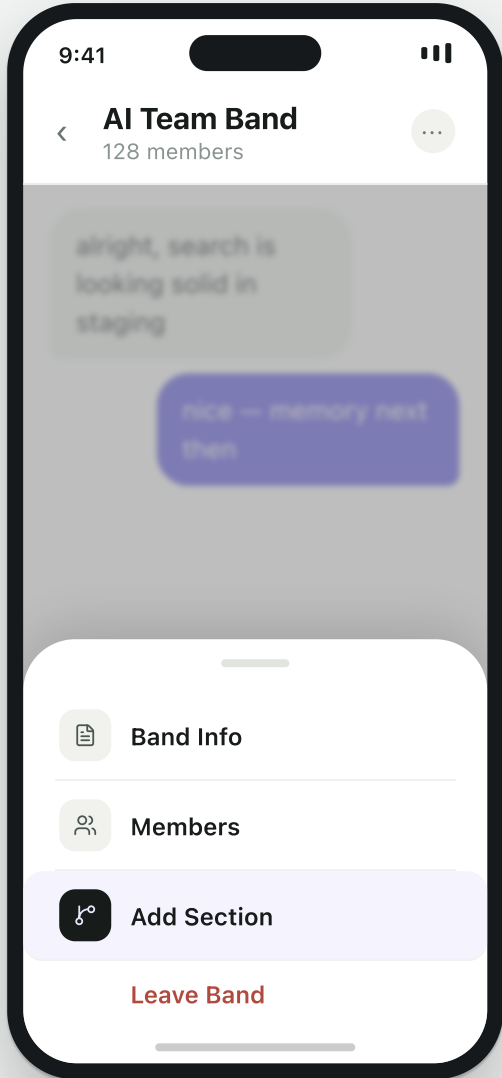

Create Band — 4b. Join Mode (Public path)
Follow Only is a new role: read Announcements, no posting rights

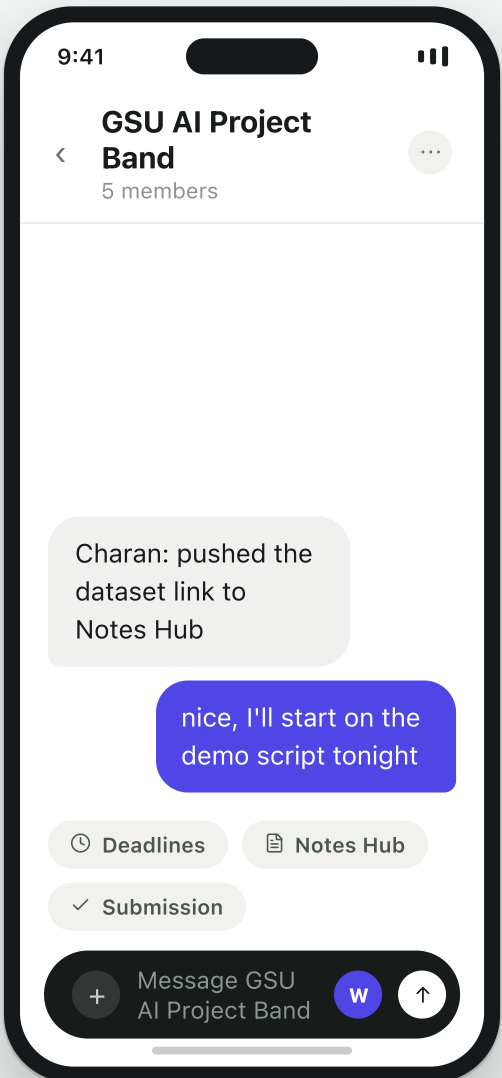

Create Band — 5. Customize Modules
Defaults pre-selected per template, everything toggleable, final step for both paths

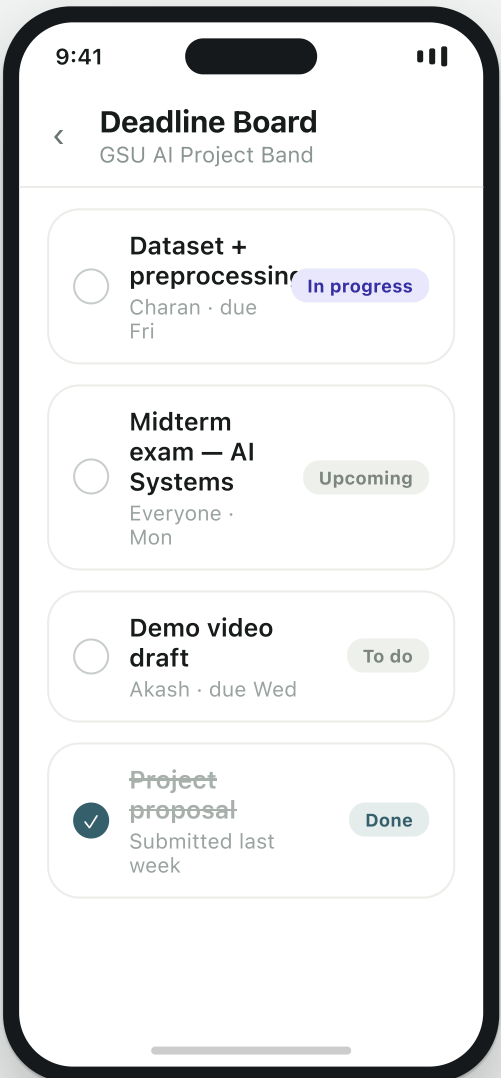

Creator Band chat
Media Vault, Review & Approval, Edit Space

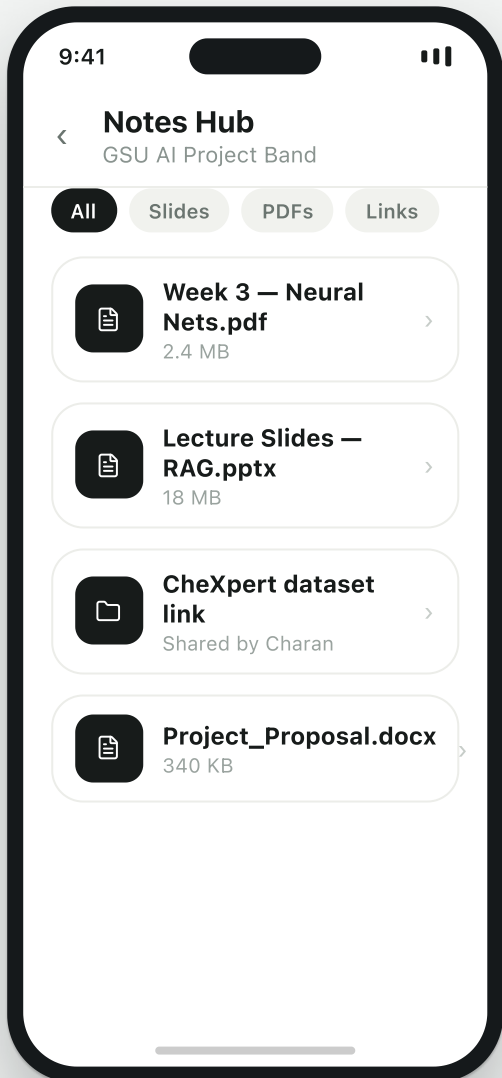

Band menu — Add Section
Categorized Sub-Bands inside this Band — same members, own history, no separate admin

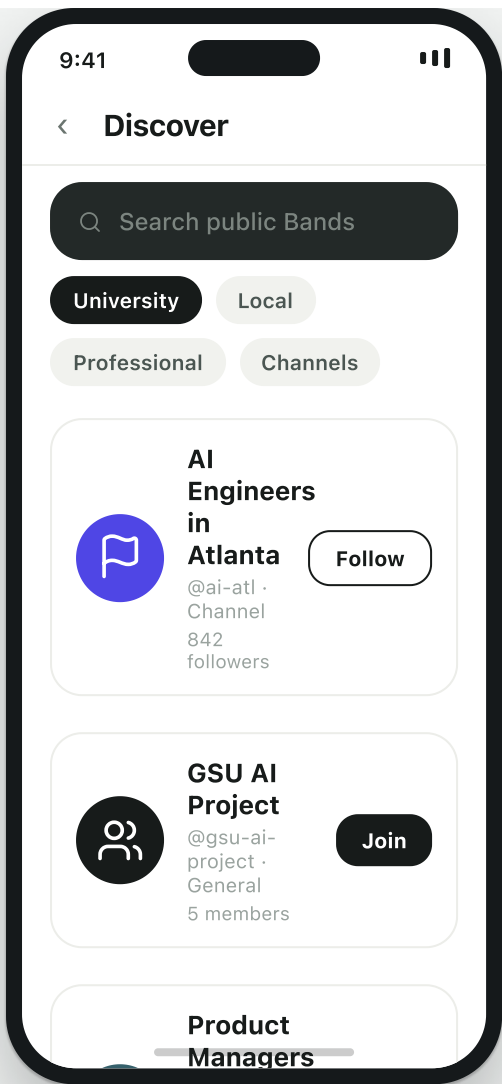

Student Band chat
Deadline Board, Notes Hub, Submission Checklist

Deadline Board
Assignments and exam dates in one view

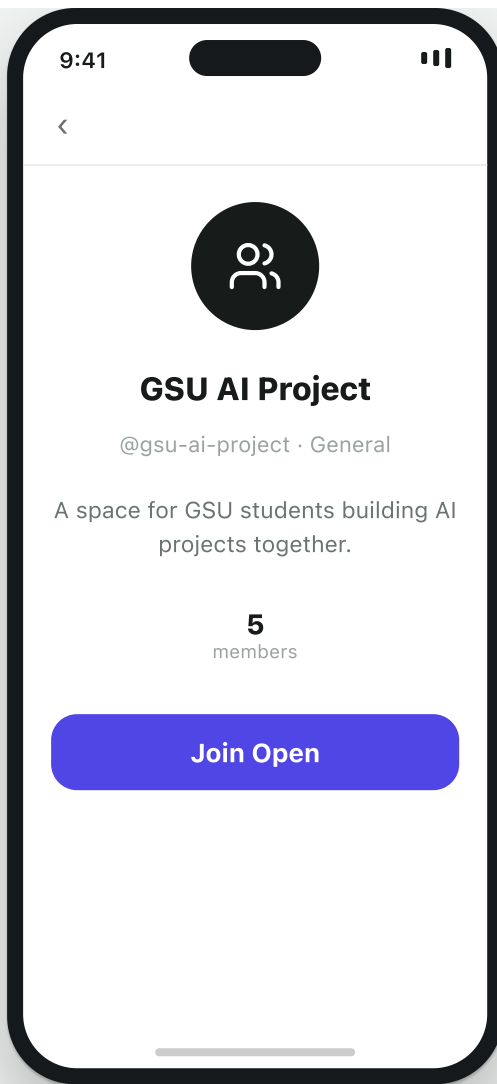

Notes Hub
Study notes, slides, and links in one place

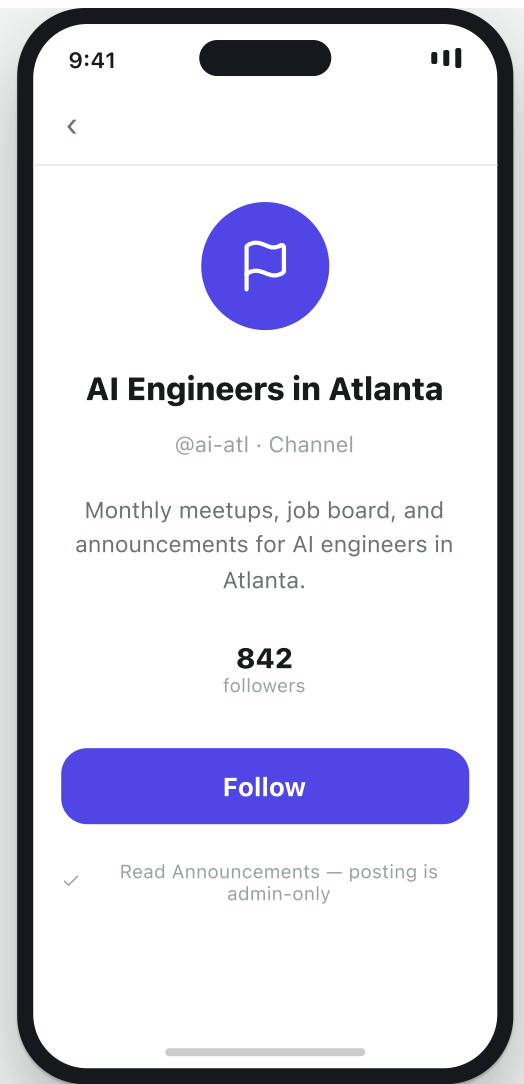

Discover

Public Bands only — search + category chips, handle shown under every result

Public Band preview — Open Join

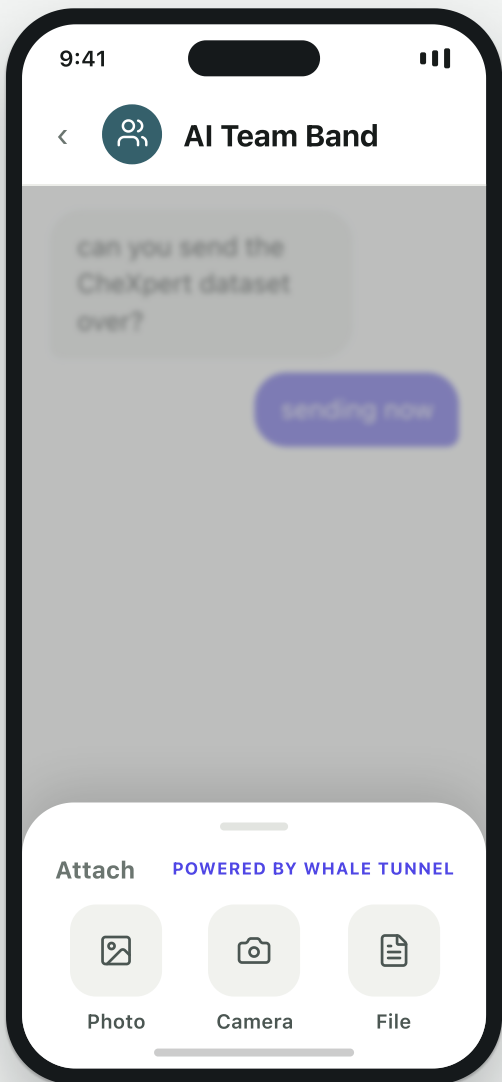

Handle + member count shown before joining, tap to join instantly

Public Band preview — Follow Only

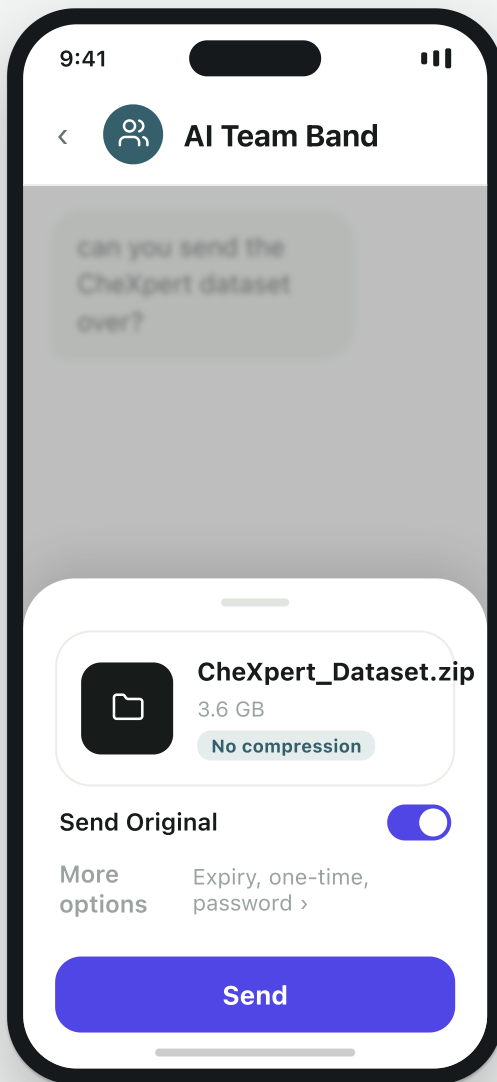

Channel join mode: followers can read Announcements but can't post

Original-quality sharing Powered by Whale Tunnel

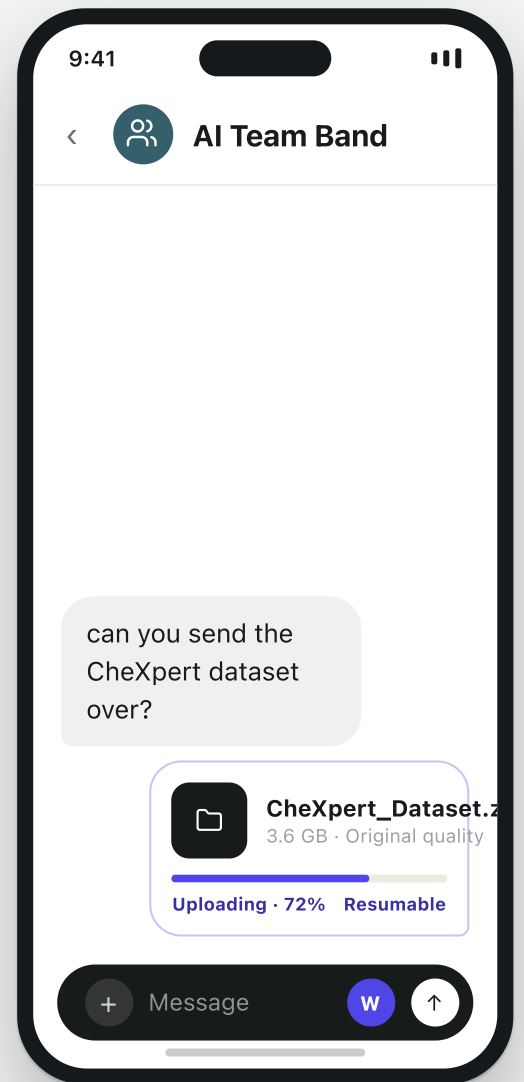

Attach sheet

Just Photo/Camera/File — nothing else

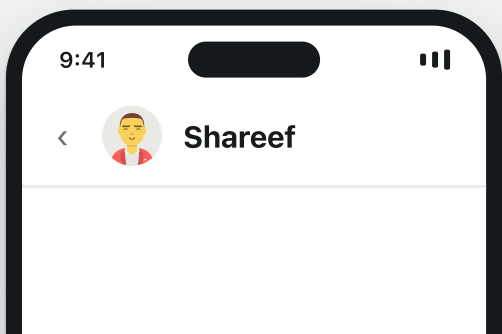

Send preview — over 1 GB

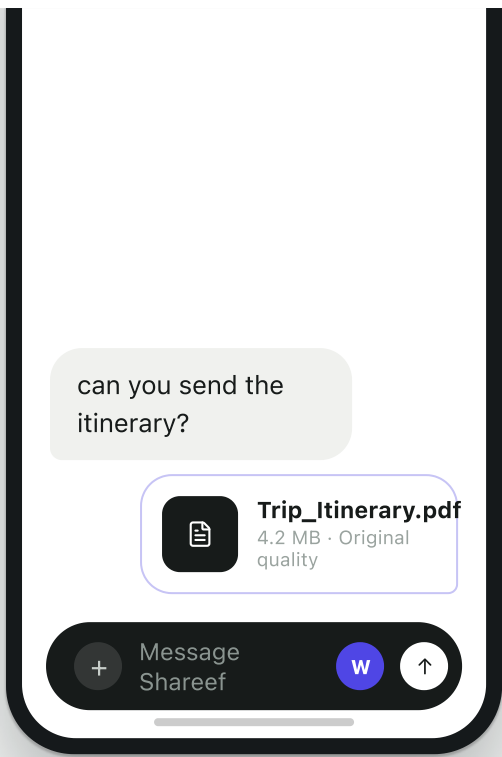

Expiry/one-time only appear when the file is actually large

Sent, inline — over 1 GB

Chunked, resumable, temporary tunnel

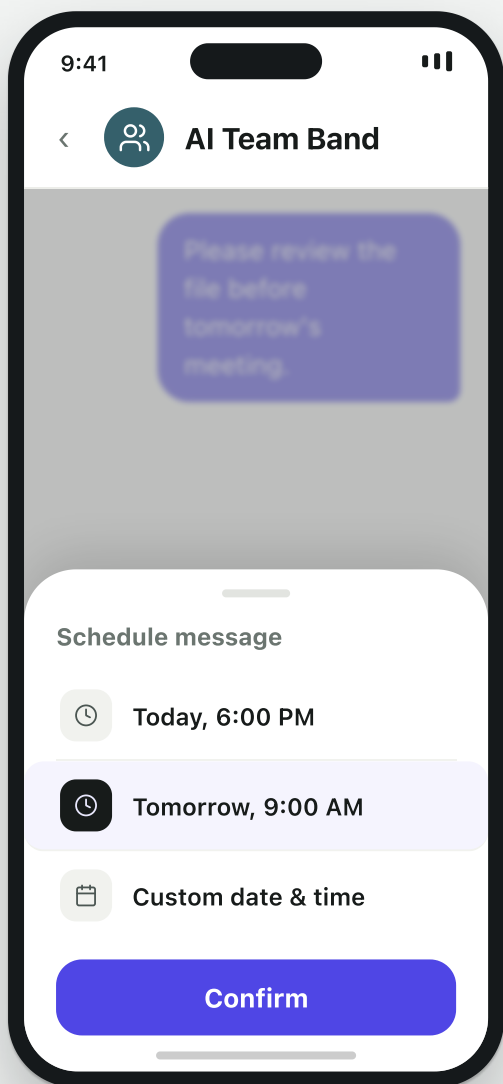

Sent, inline — under 1 GB

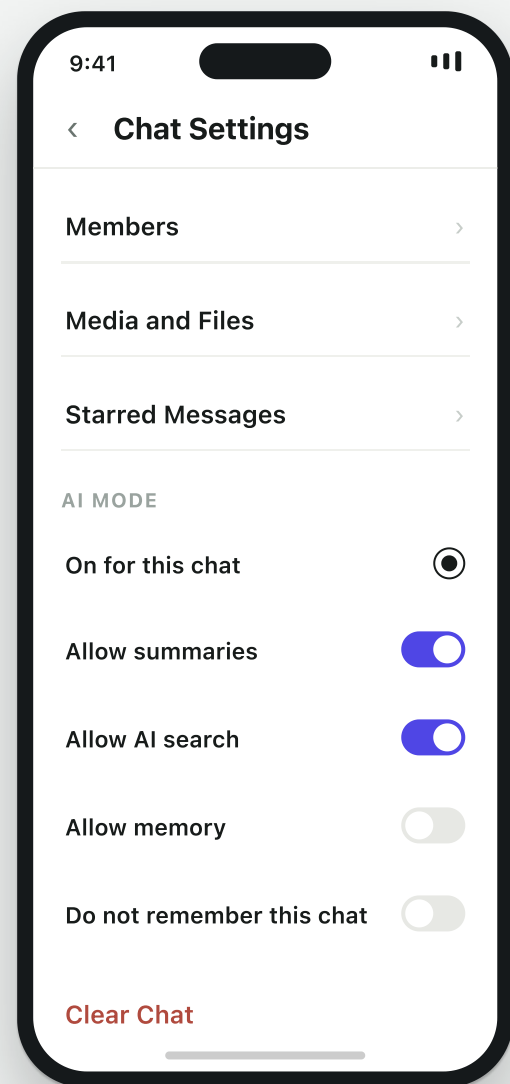

No progress bar, no expiry — just sends

Scheduling Lives inside the chat, not a main tab

Schedule flow

Long-press send, or ask W directly

Chat Settings — AI Mode

Per-chat control, separate from encryption
